

# InterAcct's Fully Integrated Inventory Control

The importance of having a fully integrated accounting/business software package is best appreciated with the Inventory module.

Even if you only purchase inventory (materials, stock items) on an "as required" basis (rather than holding stock in a warehouse), you will benefit from the integrated approach.

The integrated approach is where you should only need to input a 'transaction' once, and all related files are immediately updated. There are simple menu links from one area of the system to another. They all inter-connect. You can see summaries, track movements history, and "drill down" into the detail.

Proper management of stock gets down to having the right amount of stock - when it is needed. To be able to reduce purchase costs through Loyalty Buying Contracts with Suppliers. To be prompted when it is time to re-order so as to maximize the stock turnover.

To be able to substantially reduce the administration time by taking the "Required to Purchase" list (generated by Back Orders and Job Budget requirements), then automatically creating (pro forma) Purchase Orders, and then not having to re-key the items once they are received on a Delivery Docket.

Having this level of integration of systems demonstrated to you will prove its' many advantages.
